

I. DESCRIPTION OF STUDY PROGRAMME FORM

BASIC INFORMATION	
<i>Title of study programme</i>	Discrete mathematics and its applications
<i>study programme coordinator</i>	University of Rijeka
<i>Study programme implementor</i>	Department of mathematics – University of Rijeka
<i>Type of study programme</i>	University
<i>Level of study programme</i>	Graduate
<i>Academic/professional degree awarded upon completion of study</i>	Master of Science in Mathematics - course: discrete mathematics and its applications

1. INTRODUCTION

1.1. Reasons for initiating the study

Reasons for initiating the study are: economy needs, improvement of scientific research at the University of Rijeka (by introducing contemporary methods of planning and analysis of experiments), shown interest of potential students and personnel potential of the Department of mathematics.

Discrete mathematics is a branch of mathematics that has many applications in other fields of science and economy. In this study program students will, among other things, acquire knowledge from graph theory, optimization, cryptography, coding theory and design of experiments.

Based on surveys of students on undergraduate course of mathematics at the University of Rijeka, we realized that there is great interest in this graduate program. We also believe that mentioned study program will attract students who live outside our district, since it will be the only study of this direction in the Republic of Croatia.

Department of mathematics, University of Rijeka, has personnel capabilities for performing this study, since the scientific work of thirteen employees of the Department is closely associated with the fundamental topics that will be processed in the framework of this study.

1.2. Estimation of purpose with respect to labor market needs in public and private sector

Acquired knowledge in this study is very applicable in the economy; graph theory has broad applications, from telecommunications to the design of road networks, coding theory and cryptography is used in everyday communication. Since there will be more jobs related to ICT technologies and data protection, needs for this profile will be larger. Optimization is very purposeful in various business processes, while the design and analysis of experiments is necessary in conducting of any experiment, from the manufacturing new drugs and testing machines and their parts. Also, knowledge of design of experiments is also very applicable in analyzing characteristics of the finished products, so we expect that the labor market will identify and show need for this profile.

1.2.1. Relationship with the Local Community (economy, business, civil society)

Acquired knowledge in this study is applicable in various sectors of the economy. Because of acquired knowledge in coding theory, cryptography, graph theory, and subjects in computer science, graduates can be employed in the economic subjects dealing with telecommunications and information technology. Acquired knowledge from the optimization and design of experiments provides employment in several branches of economy, for example, in companies that need to test finished products or prototypes.

1.2.2. Compatibility with the requirements of professional associations (recommendation)

While creating a study program, the following resource was especially considered:

Tuning Educational Structures in Europe

(<http://tuning.unideusto.org/tuningeu/>), especially the part that refers to the study of mathematics.

(<http://tuning.unideusto.org/tuningeu/index.php?option=content&task=view&id=27&Itemid=50>).

1.2.3. List of the possible partners outside the higher education system who expressed interest for study program

For now, the greatest interest in this study showed companies dealing with information technology, since these companies are often employing former students of the Department of mathematics, who graduated on our educational courses: Mathematics and Mathematics and Computer Science.

1.3. *Comparability of study program with similar programs of accredited institutions of higher education in Croatia and the EU (specify and explain the comparability of the two programs, of which at least one of the EU, with a program that is proposed, and state network sites)*

Study program of Discrete mathematics and implementation is comparable with the study program Mathematics (MSci) at the Queen Mary University of London

(http://www.qmul.ac.uk/courses/courses.php?course_id=127&dept_id=16&ugcourses=1&course_level=2)

and the study program at the University of Essex, modules MSc Discrete mathematics and its applications and MSc Statistics and Computer Science

(<http://www.essex.ac.uk/coursefinder/pdfs/pg/MATH.pdf>).

Comparability with the study of Mathematics (MSCI) at the Queen Mary University of London is reflected in the subjects: combinatorics and graph theory (Combinatorics, Enumerative and Asymptotic Combinatorics, Extremal Combinatorics, Algorithmic Graph Theory), probability theory (Probability I, Probability II, Probability III), statistics (Introduction to Statistics, Statistical Modelling I, Statistical Modelling II, Advanced Statistical Modelling, Statistical Theory, Computational Statistics, Bayesian Statistics), coding theory and cryptography (Coding Theory, Cryptography), algebra and group theory (Algebraic Structures I, Algebraic Structures II, Fields and Galois Theory, Group Theory) and design of experiments (Design of Experiments). Courses of London's studies are numerous because it is four-year study.

Comparability with studies at the University of Essex is evident over the subjects of Graph Theory, Cryptography and Codes, Stochastic Processes and Experimental Design, which are part of the module MSc Discrete Mathematics and its Applications and MSc Statistics and Computer Science.

Performers of mentioned programs emphasize that finishing this study represents a good basis for the possible development of scientific career in the field of natural sciences and engineering, but also allows employment in various areas where is required algorithmic way of thinking and the ability to analyse data.

1.4. *Openness to the horizontal and vertical student mobility in national and international higher education*

This graduate program can enroll bachelors who have completed undergraduate course in mathematics in any Croatian or foreign university. After finishing this study, masters of mathematics will be able to enroll the Common doctoral program in mathematics at the University J.J. Strossmayer in Osijek, University of Rijeka, University of Split and the University of Zagreb, as well as appropriate doctoral studies abroad.

1.5. *Compatibility with mission and strategy of the University of Rijeka*

According to the Strategy of University of Rijeka for 2007-2013, university will devote special attention to the development of natural science. Since this is the first noneducational graduate course in mathematics at our university, implementation of this study certainly contributes in achieving the strategic aim of development of the natural sciences. We also expect that this study will contribute to the development of other natural sciences at the University by creating personnel who can apply appropriate mathematical methods for improving the process of planning and implementing experiments. One of the strategic aims of the University is development of research in the field of information and communication technologies. Since coding theory and cryptography are one of the main content of this program, study also contributes in achieving goal of development of ICT research.

The programme is also adjusted with the Strategy of University of Rijeka 2014.-2020.

- Increase the number of students in engineering, biomedicine, biotechnology and natural sciences, in information and communication technology and in interdisciplinary studies related to these fields

There is not many candidates with this profile in the labor market. According to the Strategy of University of Rijeka (2014.-2020.), strategic goal of University is to increase entry quotas and the number of graduates on study programmes related to natural sciences.

- Achieve favorable ratio of students per lecturer

Entry quota of 15 enables a favorable ratio of students per lecturer on the Department studies.

- Increase eligibility in the regime of internal mobility

The programme ensures eligibility in the regime of internal mobility with the large number of elective courses in this study programme being compulsory on other study programmes (studies on Department of Mathematics, Department of Informatics or Department of Physics).

- Increase the portion of e-learning in study programmes

Almost all courses use advanced tools for e-learning, which causes quality changes in education. For the majority of courses, there is a version of a course on MudRi, e-learning system of University of Rijeka, at the same time keeping high standards of education quality, especially communication between professors and students. The needed ICT infrastructure is secured, ie. computer and software support for educational activities and e-learning.

- Ensure regular monitoring of students' satisfaction

Study programme predicts efficient administration of measures for monitoring and improvement of students' success which is conducted by the department's Board for quality assurance.

- Determine the list of practical competencies which are guaranteed after finishing the studies and adjust the study programmes in the (re)accreditation procedure.

1.6. Institutional development strategy of study programs (compatibility with the mission and strategic aims of the institution)

This study, as first noneducational course in mathematics at the University of Rijeka, is extremely important for implementing the strategy of development programs at the Department of mathematics. We also expect connecting with other programs of components of the University (mainly university departments) that should recognize the programs' potential in the development of competencies for future researchers.

On the 65. meeting, on October 20th, 2014., The Council of the Department of Mathematics has accepted the Strategy of University of Rijeka 2014.-2020. as a strategic document of the Department of Mathematics, University of Rijeka, and defined prioritized strategic goals of the Department. Some of the strategic goals related to education are:

- Increase the number of students who enrolled in graduate studies
- Increase the number of students who graduated
- Determine the list of practical competencies which are guaranteed after finishing the studies and adjust the study programmes in the (re)accreditation procedure
- Increase the portion of e-learning in study programmes

The implementation of Graduate university studies Discrete Mathematics and Applications is in accordance with the afore-mentioned mission and it contributes to realisation of strategic goals of Department of Mathematics, University of Rijeka.

1.7. Other important information - in the opinion of the proposer

Although the proposed study is first noneducational graduate course study implemented by the Department of mathematics, University of Rijeka, and different by its content and learning outcomes from existing courses of mathematics in Republic of Croatia, we want to emphasize that he will not represent a significant additional burden in terms of teacher load. In fact, some compulsory and all of elective courses are already implemented (as compulsory or elective) within the framework of existing studies performed by the Department of mathematics, Department of physics and Department of informatics, University of Rijeka (see section 3.4). Also, 6 new courses (36 ECTS) will be offered as an elective courses to students of existing programs in the Department of mathematics, as well as other components of the University of Rijeka.

2. GENERAL PART

2.1. Title of study programme

Discrete mathematics and its applications

2.1.1. Type of study programme

University

2.1.2. Level of study programme

Graduate

2.1.3. Area of study programme (scientific/artistic) – indicate the title

Mathematics
2.2. Study programme coordinator
University of Rijeka
2.3. Implementor/s of study programme
Department of mathematics – University of Rijeka
2.4. Duration of study programme (indicate possibilities of part-time study, long distance study)
Study lasts 4 semesters, there is no possibility of attending classes in working time, neither through distance learning.
2.4.1. ECTS credits – minimal number of credits required for completion of study programme
120 ECTS
2.5. Enrolment requirements and selection procedure
Candidates who achieved mathematical competencies described by the following learning outcomes can enroll the study programme:
<ol style="list-style-type: none">1. axiomatically and inductively construct the fields of real and complex numbers2. describe an algebraic, metrical and topological structure of Euclidean space \mathbb{R}^n3. determine limits of a function, continuity and uniform continuity, and other properties of a function from \mathbb{R}^n to \mathbb{R}^m4. analyse algebraic structures and differentiate basic properties of groups, rings, fields and vector spaces5. differentiate properties of a linear operator6. axiomatically construct Euclidean geometry with the overview of its historical development7. formulate properties and existence conditions of regular polygons and polyhedra8. formulate and analyse graph properties9. formulate basic notions of descriptive statistics10. use basic notions related to binary quadratic forms11. describe set operations on finite and infinite sets12. apply and understand properties of real elementary functions and fundamental complex functions of a complex variable13. apply and understand use of differential calculus in geometry and in the analysis of properties of functions that are given in an explicit, implicit and parametric form14. apply and understand use of integral calculus in geometry15. apply and understand vector operations in problem solving16. apply and understand properties of cyclic and permutation groups in problem solving17. apply and understand the algorithm for finding the shortest path and the optimal tree in a graph18. apply and understand properties of probability19. apply and understand division algorithms20. apply and understand numerical methods for solving nonlinear equations, definite integrals and ordinary differential equations, while analysing the obtained results21. apply and understand simple and compound interest formulas in financial mathematics22. solve indefinite and definite integral, Riemann integral of a function of several variables, and line and surface integral23. expand functions into Taylor and Laurent series24. determine the Jordan form of a matrix25. choose an appropriate geometric construction for solving constructive problems using geometry equipment26. choose an appropriate counting principle and/or a form of Dirichlet's principle for solving problems27. solve combinatorial problems using recurrence relations28. solve problems using properties of random variables

29. conduct statistical data analysis and testing hypothesis using computers
30. count using modular arithmetic, solve congruence equations and different types of congruence systems
31. apply methods for solving interpolation problems and function approximations
32. determine present value of money flow, financial rent, installments loan and compound interests in applications
33. solve problems using Lagrange's theorem, Sylow's theorems and Chinese remainder theorem
34. analyse convergence of sequences and series in \mathbb{R}^n
35. construct orthonormal basis for an inner product space
36. differentiate vector and matrix norms, differentiate inner product spaces, normed spaces and metric spaces
37. differentiate and apply methods for solving systems of linear equations and geometrically interpret solvability of the systems in the plane and in the space
38. analyse mappings of algebraic structures with the emphasis on the isomorphism theorems
39. relate types of walks in a graph and their properties with applications in problem solving
40. compare plane geometries (Euclidean and non-Euclidean) and their models according to their characteristics
41. analyse mappings of n -dimensional Euclidean space and corresponding methods in solving problems using a constructive and an analytical approach
42. analyse basic probability models and distributions
43. explain a role of mathematical logic in mathematics as a science, the historical and intuitive importance of the logic of statements, and reasons for occurrence of the stronger logical theories, especially first-order logic

This graduate courses at the Department of Mathematics can be enrolled by the bachelors who finished the graduate course if one or the following conditions is satisfied:

1. The applicants who have finished the university graduate course and have acquired minimally 135 ECTS from mathematical courses, which is determined on the submitted documentation,
2. the applicants have who finished the university graduate course and have acquired minimally 120 ECTS from mathematical courses and have passed the examination organized by the Department of Mathematics.

Applications for the examination are accepted every year until 15th May, while the time period for the examination lasts from 1st June until 15th July.

2.6. Study programme learning outcomes

2.6.1. Competences which student gains upon completion of study (according to CROQF (HKO): knowledge, skills and competences in a restricted sense –independence and responsibility)

Through the study programme, students will acquire theoretical and practical knowledge which helps them find a job in economy, and moreover, acquisition of learning new skills. Furthermore, students will be able to

- apply and understand the aspects of real, complex, harmonic analysis and measure theory in solving problems
- apply and understand the aspects of linear algebra, algebra and group theory in solving problems
- apply and understand the aspects of models of geometry with the emphasis on Euclidean geometry in problem solving, while using a constructive and an analytical approach
- apply and understand the aspects of discrete and combinatorial mathematics, probability and statistics in solving problems
- apply and understand the aspects of number theory, set theory and mathematical logic in solving problems
- apply and understand the aspects of applied mathematics in solving problems
- differentiate and analyse cryptographic systems
- differentiate and analyse different types of codes
- differentiate methods for detecting errors in data transmission and analyse conditions in under which it is possible to correct the error
- apply and understand use of the simplex algorithm and other linear programming methods
- have knowledge of matrix games
- successfully solve integer programming problems
- conduct a procedure for testing statistical hypothesis and apply methods for of statistical data analysis with or without using appropriate computer programs
- design and analyse experiments and solve a problem while using appropriate computer programs
- solve problems using graph theory, design theory and coding theory, writing advanced algorithms and implementing them in appropriate computer programs if needed
- mathematically prove validity of procedures and formulasthat are used within the courses of the study programme

- use acquired knowledge of theorems, procedures and formulas in solving problems

Described learning outcomes for the proposed program, or competences that students acquire, in accordance with the Croatian Qualifications Framework qualify this program as a program of "Level 7", where labels A-G and associated levels are introduced as follows:

- A – factual knowledge
- B – theoretical knowledge
- C – cognitive skills
- D – practical skills
- E – social skills
- F – autonomy
- G – responsibility

Through this course students will develop independence and responsibility, in particular through the seminars, projects, and solving individual assignments.

LEVELS	KNOWLEDGE	
	A Factual knowledge	B Theoretical knowledge
1	A1 Memorizing general facts	B1 Memorizing general theoretical knowledge
2	A2 Understanding basic facts in performing simple tasks	B2 Understanding basic theoretical knowledge in performing simple tasks within a field of work or study
3	A3 Applying basic facts in solving problems within a field of work or study	B3 Applying basic theoretical knowledge in solving problems within a field of work or study
4	A4 Analyzing facts within a field of work or study	B4 Analyzing theoretical knowledge within a field of work or study
5	A5 Analyzing and synthesizing facts that create awareness of the known boundaries of the knowledge within a field of work or study, and their evaluation	B5 Analyzing and synthesizing theoretical knowledge that creates awareness of the known boundaries of the knowledge within a field of work or study, and their evaluation
6	A6 Evaluation of the facts within the field of work or study, a part of which is at the forefront of knowledge in a field of work or study	B6 Evaluation of theoretical knowledge within the field of work or study, a part of which is at the forefront of knowledge in a field of work or study
7	A7 Evaluation of the facts at the most advanced frontier of a field (of work or research) and at the interface between different fields that could be the basis of scientific research in a part of this field	B7 Evaluation of theoretical knowledge at the most advanced frontier of a field (of work or research) and at the interface between different fields that could be the basis of scientific research in a part of this field
8	A8 Creating and evaluating facts in part of the field of scientific research, which leads to shifting boundaries of knowledge	B8 Creating and evaluating theoretical knowledge in part of the field of scientific research, which leads to shifting boundaries of knowledge

LEVELS	SKILLS		
	C	D	E

	Cognitive skills	Practical skills	Social skills
1	C1 Basic concrete logical thinking (required for execution of simple concrete tasks) in familiar conditions	D1 Performing simple routine movements in familiar conditions	E1 Realization of general rules of behavior in familiar conditions
2	C2 Concrete logical thinking (required for application of relevant information in the execution of a set of simple tasks) in familiar conditions	D2 Simple use of methods, instruments, tools and materials in familiar conditions	E2 Realization of simple communication and cooperation with certain individuals in familiar conditions
3	C3 Basic concrete creative thinking (required for selection and application of relevant information in the execution of a set of complex routine tasks) in familiar conditions	D3 Complex use of methods, instruments, tools and materials in familiar conditions	E3 Realization of complex communication and cooperation within a group in familiar conditions
4	C4 Basic abstract logical thinking (required for selection and application of relevant information in the execution of a set of complex specific tasks) in changing conditions	D4 Performing complex movements and complex use of methods, instruments, tools and materials (in the execution of a set of complex specific tasks) in changing conditions	E4 Realization of complex communication and cooperation within a group in changing conditions
5	C5 Basic abstract creative thinking (required for developing solutions of abstract problems) in partially unpredictable conditions	D5 Performing complex movements and complex use of methods, instruments, tools and materials in partially unpredictable conditions , as well as developing simple methods, instruments, tools and materials	E5 Realization of management and complex communication and cooperation within a group in partially unpredictable conditions
6	C6 Abstract logical thinking (required for developing solutions of abstract problems) in unpredictable conditions	D6 Performing complex movements and complex use of methods, instruments, tools and materials in unpredictable conditions , as well as developing complex methods, instruments, tools and materials	E6 Realization of management and complex communication and cooperation in different social groups in unpredictable conditions
7	C7 Abstract creative thinking (required in research for development of new skills and procedures and for integration of different areas)	D7 Performing complex movements and complex use of methods, instruments, tools and materials, as well as developing complex methods, instruments, tools and materials required for research and innovative process	E7 Realization of management and complex communication and cooperation in different social groups and nations in unpredictable conditions

8		D8 Creating, analyzing and evaluating new proposed specialized movements and new methods, instruments, tools and materials	E8 Creating new social and civilizationally accepted communication and cooperation with groups of different orientations and nations
----------	--	---	---

LEVELS	COMPETENCES	
	F Autonomy	G Responsibility
1	F1 Execution of simple tasks under constant direct and professional guidance in familiar conditions	G1 Taking responsibility for execution of simple tasks in familiar conditions
2	F2 Execution of simple tasks under occasional direct and professional guidance in familiar conditions	G2 Taking responsibility for execution of simple tasks and relationships with others in familiar conditions
3	F3 Execution of complex tasks and adjustment of your own behavior within the given guidelines in familiar conditions	G3 Taking responsibility for execution of complex tasks in familiar conditions
4	F4 Execution of complex tasks and adjustment of your own behavior within the given guidelines in changing conditions	G4 Taking partial responsibility for assessment and improvement of activities in changing conditions
5	F5 Participation in managing activities in partially unpredictable conditions	G5 Taking full responsibility for management and limited responsibility for evaluation of improvement of activities in partially unpredictable conditions
6	F6 Managing professional projects in unpredictable conditions	G6 Taking ethical and social responsibility for management and evaluation of professional development of individuals and groups in unpredictable conditions
7	F7 Managing complex and changing surrounding conditions and deciding about changing them	G7 Taking personal and team responsibility for strategic decision-making and successful implementation and execution of tasks in unpredictable conditions , and social and ethical responsibility during the execution of tasks and consequences of the results of those tasks
8	F8 Expressing personal professional and ethical authority and permanent commitment to researching and developing new processes	G8 Taking ethical and social responsibility for the success of the research , for the social utility of research results and for possible social consequences

2.6.2. Employment possibility (list of possible employers and compliance with professional association's requirements)

Acquired knowledge in this study is very applicable in the economy; graph theory has broad applications, from telecommunications to the design of road networks, coding theory and cryptography is used in everyday communication. Acquired knowledge from the optimization and design of experiments provides employment in several branches of economy, for example, in companies that need to test finished products or prototypes.

2.6.3. Possibility of continuation of study on higher level

After finishing this study, masters of mathematics will be able to enroll the Common doctoral program in mathematics at the University J.J. Strossmayer in Osijek, University of Rijeka, University of Split and the University of Zagreb, as well as appropriate doctoral studies abroad.

2.7. Upon applying for graduate studies list proposer's or other Croatian institution's undergraduate study programmes which enable enrolment to the proposed study programme

Enroll to this graduate program is possible with finished undergraduate course Mathematics completed at the Department of mathematics, University of Rijeka, and finished undergraduate studies of mathematics in any of the Croatian and foreign universities.

2.8. Upon application of integrated studies - name reasons for integration of undergraduate and graduate level of study programme

3. PROGRAMME DESCRIPTION

3.1. List of compulsory and elective subjects and/or modules (if existing) with the number of active teaching hours required for their implementation and number of ECTS-credits (appendix: Table 1)

3.2. Description of each subject (appendix: Table 2)

3.3. Structure of study programme, dynamic of study and students' obligations

The study consists of a major number of compulsory subjects (92 ECTS) and a minor number of elective courses (28 ECTS, or 23.33% of the total number of ECTS for the study).

Basic subjects differ among the compulsory subjects, and they should be common to all (future) noneducational mathematics graduate programs at the Department of mathematics, University of Rijeka (56 ECTS), with whose adoption students acquire the necessary knowledge, skills and competences for further development in the field of mathematics, and set the basis for adoption subjects in area of discrete mathematics and applications.

The rest of the compulsory courses (36 ECTS) is closely associated with the name of study, respectively with learning outcomes from section 2.6.1..

By choosing elective courses student is developing himself, so he can acquire knowledge, on his own choice, that will introduce him with related fields of physics, computer science or education of mathematics. In cooperation with the Department of physics, Department of mathematics and the Faculty of Philosophy interdisciplinary nature of this study is increasing.

Rhythm of study is defined by Study regulations at the University of Rijeka, as well as general obligation, whereas the specific responsibilities of students are determined by description of each course and associated executive program, which is published every year before the related semester.

3.3.1. Enrolment requirements for the next semester or trimester (course title)

Admission requirements are determined by the Study regulations at the University of Rijeka.

3.4. List of courses and/or modules student can choose from other study programmes

Course title (course status within the proposed program)	The existing program in which the course is taught (course status within the other program)	Note
Vector Spaces 1 (compulsory)	Graduate course in Mathematics – Math. Education Specialization (compulsory)	DM
Measure and Integral (compulsory)	Graduate course in Mathematics – Math. Education Specialization (elective)	DM
Algebra 1 (compulsory)	Graduate course in Mathematics – Math. Education Specialization (elective)	DM
Linear Programming (compulsory)	Graduate course in Mathematics – Math. Education Specialization (compulsory) Graduate course in Mathematics and Computer science – Education Specialization (compulsory)	DM
Partial Differential Equations (elective)	Undergraduate course in Mathematics (elective)	DM, because of the complexity of the course it is transferred to graduate level

DM – Department of mathematics

DP – Department of physics

DCS – Department of computer science

3.5. List of courses and/or modules that can be implemented in a foreign language (specify the language)

All compulsory courses of this study can be performed in English.

3.6. Allocated ECTS credits that enable national and international mobility

The proposed study enables mobility among the related studies in all Croatian universities and abroad. We expect especially good cooperation with the Department of mathematics, University of Ghent, Belgium, with which the Department of mathematics, University of Rijeka has signed bilateral Erasmus agreement and where exists many courses in the area of discrete mathematics.

3.7. Multidisciplinarity/interdisciplinarity of study programme

Through this study program, students will gain knowledge which will enable cooperation with scientists from other fields of science. Graph theory is widely used in chemistry and computer science, and students will be able to participate in scientific and professional work in these areas. Knowledge of coding theory and cryptography will enable collaboration with experts in the field of Information and communication technology, while knowledge in designing experiments will qualify them for connecting with teams of experts who conduct experiments in various fields of science, for example, in studies in medicine and biotechnology. Knowledge gained from the optimization is also applicable in various fields of science, for example in scientific and professional work in the technical sciences. Through elective courses, which are realized in cooperation with the Department of informatics and Department of physics of our University, interdisciplinary of study program is additionally induced.

3.8. Mode of study programme completion

The final part of the study is exam in front of committee consisting of three members. An integral part of the graduate exam is presentation and defense of thesis which student made during the last semester. Student has right to access final exam after he passed all exams and fulfilled all obligations assigned by study program.

3.8.1. Conditions of approval of final work /thesis and/or final/thesis exam application

Conditions for approval of application for the graduate exam are assigned by Regulation of thesis and final exam at the university graduate courses of Department of mathematics, University of Rijeka (<http://www.math.uniri.hr/dokumenti.php>).

3.8.2. Composing and furnishing of final work/thesis

Forming thesis is defined by Regulations of thesis and final exam at university graduate courses of Department of mathematics, University of Rijeka (<http://www.math.uniri.hr/dokumenti.php>).

3.8.3. Final work/thesis assessment procedure and evaluation and defense of final work/thesis

Evaluation process of thesis and graduate exam is defined by Regulations of thesis and final exam at the university graduate courses of Department of mathematics, University of Rijeka (<http://www.math.uniri.hr/dokumenti.php>).

Course status	Compulsory	
Year	1	
Credit values and modes of instruction	ECTS credits / student workload	6
	Hours (L+E+S)	30 + 30 + 0

1. COURSE DESCRIPTION
<i>1.1. Course objectives</i>
<p>The main course objective is to get students familiar with basic concepts of vector space theory. For this purpose, it is necessary within the course to:</p> <ul style="list-style-type: none"> - define vector space and describe characteristic examples of vector spaces - define linear operators and analyse their properties - analyse matrix representation of a linear operator - define adjoint space - define and analyse invariant subspaces and operator eigenvalues - describe reduction of operator on finite dimensional vector spaces - define bilinear form - define and describe properties of a normal operator
<i>1.2. Course prerequisite</i>
None.
<i>1.3. Expected outcomes for the course</i>
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - know basic examples of vector spaces and linear operators (A6, B6, C6, D4, E4, F3) - solve problems related to the calculation of the rank (A6, B6, C6, D4, E5, F3) - solve problems related to adjoint spaces (A6, B6, D4, E5, F3) - construct Jordan basis (A6, B6, C6, D4, E5, F3) - apply and understand the procedure of reduction of an operator on finite dimensional vector spaces in particular problems (A6, B6, D4, E5, F3) - know basic examples of unitary spaces (A6, B7, D4, E5, F3) - classify main properties of bilinear forms (A6, B6, D4, E5, F3) - classify main properties and examples of normal operators (A6, B6, D4, E5, F3) - mathematically prove validity of all procedures and formulas that are used within the course (A6, B6, D4, E5, F3)
<i>1.4. Course content</i>
<p>Vector space, basic notions and example. Quotient space. Linear operators, basic notions and examples. The space (X, Y). Limit in the space $\text{Hom}(X, Y)$. Algebra. Minimal polynomial. Adjoint space and adjoint operator. Invariant subspaces and eigenvalues. Nilpotent operator. Reduction of operators on finite dimensional vector spaces. Jordan matrix of an operator. Operator functions. Resolvent. Geometry of unitary spaces. The structure of bilinear forms. Normal operators.</p>

1.5. 1.6. Comments					
1.7. Student requirements					
Students are required to attend classes and actively participate in them. They are required to achieve a certain number of points during the semester and to pass the final exam (details will be described in the course curriculum).					
1.8. Evaluation of assessments					
Class attendance & class participation		1.5	Seminar paper	Experiment	
Written exam	2	Oral exam	2	Essay	Research work
Project		Continuous assessment	0.5	Presentation	Practical work
Portfolio					
1.9. Assessment and evaluation of students' work during the semester and on the final exam					
Students' work will be evaluated and assessed during the semester (e.g. preliminary exams, tests, seminars, online tests, homework etc.) and on the final exam. Total number of points student can earn during the semester is 70, while on the final exam student can achieve 30 points. The detailed elaboration of monitoring and evaluation of students' work will be described in the course curriculum.					
1.10. Required literature (when proposing the program)					
1. S. Kurepa, Konačno dimenzionalni vektorski prostori i primjene, Sveučilišna naklada Liber, Zagreb, 1976. 2. H. Kraljević, Vektorski prostori, Odjel za matematiku, Sveučilište u Osijeku					
1.11. Recommended literature (when proposing the program)					
1. P.R.Halmos, Finite Dimensional Vector Spaces, Van Nostrand, New York, 1958. 2. K.Horvatić, Linearna algebra, Golden marketing – Tehnička knjiga, Zagreb, 2004. 3. S.Lang, Linear algebra, Springer Verlag, Berlin, 1987. 4. S.Lang, Algebra, Addison-Wesley Publishing Company, cop. 1967.					
1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course					
Title		Number of copies		Number of students	
1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies					
In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.

1. COURSE DESCRIPTION
<i>1.1. Course objectives</i>
<p>The main course objective is to get students familiar with:</p> <ul style="list-style-type: none"> - basic types of the linear programming problems - basic principles and algorithms for solving problems of finding minimum and maximum values - notions of dual problems of linear programming - basic notions of the matrix game theory - basics of convex programming - basics of integer programming
<i>1.2. Course prerequisite</i>
None.
<i>1.3. Expected outcomes for the course</i>
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - classify basic convex sets of points in n-dimensional Euclidean space and proper analytical methods of solving linear programming problems (A6, B6, C6, D6, E6, F6) - apply properties of a linear (affine) function to a linear programming problem with understanding (A6, B6, C6, D6, E6, F6) - define the goal function in simple linear programming problems (A6, B6, C6, D6, E6, F6) - apply and understand various algorithms for finding extreme values of a linear function on a convex set (A6, B6, C6, D6, E6, F6) - solve the dual problem of linear programming (A6, B6, C6, D6, E6, F6) - apply and understand the Simplex algorithm (A6, B6, C6, D6, E6, F6) - analyse the concept of matrix games (A6, B6, C6, D6, E6, F6) - solve problems of integer programming (A6, B6, C6, D6, E6, F6) - analyse the basics of convex programming (A6, B6, C6, D6, E6, F6)
<i>1.4. Course content</i>
<p>Convex sets in R^n. Polyhedral sets. Gauss-Jordan method for solving system of equations. Basic linear programming problems. Fourier-Motzkin method and some graphical methods for solving linear programming problems. Simplex method. Degeneracy case. Dual simplex method. Parametric linear programming. Duality. Integer linear programming. Transportation problems. Basics of matrix game theory. Basics of convex programming.</p>

1. COURSE DESCRIPTION	
1.1. Course objectives	
<p>The main course objective is to get students acquainted with:</p> <ul style="list-style-type: none"> - basic notions of ring theory, especially theory of polynomial rings, - basic notions of field theory and field extension theory, - basic notions of Galois theory. 	
1.2. Course prerequisite	
None.	
1.3. Expected outcomes for the course	
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - define, give examples and recognise basic algebraic structures with two operations (A7, B7), - have knowledge of the concept of ring, ideal and ring homomorphism (A7, B7), - have knowledge of basic theorems of polynomial theory and be able to prove them (F3, B7), - have knowledge of various types of field extensions and properly apply them (A7, B7, C7), - successfully solve problems of determining Galois group (A7, B7), - have knowledge of basics of Galois theory (A7, B7). 	
1.4. Course content	
Rings and ideals. Integral domains. Euclidean domains, principal ideal domains, unique factorisation domains. Polynomial rings. Field extensions (simple, algebraic, finite dimensional, normal, separable, radical). Field automorphisms and Galois groups, Galois field extensions and Fundamental Theorem of Galois theory. Splitting fields for polynomials and algebraic closure. Solvability of Galois group as a condition for solvability of an algebraic equation in radicals. Finite fields.	
1.5. Modes of instruction	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input checked="" type="checkbox"/> e-learning <input type="checkbox"/> field work <input checked="" type="checkbox"/> independent work <input type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input type="checkbox"/> tutorials <input type="checkbox"/> other
1.6. Comments	
1.7. Student requirements	
Students are required to attend classes and actively participate in them. They are required to achieve a certain number of points during the semester and to pass the final exam (details will be described in the course curriculum).	

<i>1.8. Evaluation of assessments</i>						
Class attendance & class participation		2	Seminar paper		Experiment	
Written exam	2	Oral exam	1.5	Essay	Research work	
Project		Continuous assessment	0.5	Presentation	Practical work	
Portfolio						
<i>1.9. Assessment and evaluation of students' work during the semester and on the final exam</i>						
Students' work will be evaluated and assessed during the semester (e.g. preliminary exams, tests, seminars, online tests, homework etc.) and on the final exam.						
Total number of points student can earn during the semester is 70, while on the final exam student can achieve 30 points.						
The detailed elaboration of monitoring and evaluation of students' work will be described in the course curriculum.						
<i>1.10. Required literature (when proposing the program)</i>						
1. T.W. Hungerford: Algebra, Reinhart and Winston, NY, 1989.						
2. H. Kraljević: Algebra, Notes for the lectures held during 2006/07 at the University of Osijek						
<i>1.11. Recommended literature (when proposing the program)</i>						
1. Stewart: Galois Theory, Chapman and Hall, London, 1973.						
2. B. Širola: Rings, fields and algebras, Notes on Algebraic Structures, PMF, Zagreb						
<i>1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course</i>						
Title			Number of copies		Number of students	
T.W. Hungerford: Algebra, Reinhart and Winston, NY, 1989.			2		15	
<i>1.13. Quality assurances which ensure acquisition of knowledge, skills and competencies</i>						
In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.						

General information

Course title	Probability theory	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Compulsory	
Year	1	
Credit values and modes of instruction	ECTS credits / student workload	6
	Hours (L+E+S)	30 + 30 + 0

1. COURSE DESCRIPTION
<i>1.1. Course objectives</i>
<p>The main course objective is to get students familiar with basic concepts, methods and results in probability theory. For that purpose, it is necessary within the course to:</p> <ul style="list-style-type: none"> - define random variables and analyse their basic properties - define distribution functions and describe the classification of random variables - define mathematical expectation and prove limit theorems for mathematical expectation - define variance and moments of random variables - prove basic inequalities in probability - describe basic types of convergence of random variables and their relations - prove weak and strong laws of large numbers - describe convergence of series of random variables - define notion of characteristic function of random variable and analyse basic properties of characteristic functions - prove inversion theorems and continuity theorems for characteristic functions - describe weak convergence of sequences of distribution functions - prove central limit theorem
<i>1.2. Course prerequisite</i>
None.
<i>1.3. Expected outcomes for the course</i>
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - apply and understand random variables and their properties in solving problems (A7, B7, E4, F5) - explain the classification of random variables (A7, B7, E4, F5) - apply and understand limit theorems for mathematical expectation (A7, B7, E4, F5) - apply and understand basic probability inequalities (A7, B7, E4, F5) - know basic types of convergence of random variables and their relations (A7, B7, E4, F5) - know weak and strong laws of large numbers, and convergence of series of random variables (A7, B7, E4, F5) - apply properties of characteristic functions in solving problems (A7, B7, E4, F5) - explain inversion and continuity theorems for characteristic functions (A7, B7, E4, F5) - explain weak convergence of sequence of distribution functions (A7, B7, E4, F5) - apply and understand the central limit theorem (A7, B7, E4, F5) - mathematically prove validity of all procedures and formulas that are used within the course (A7, B7, E4, F5)
<i>1.4. Course content</i>
<p>Random variables. Distribution functions. Classification of random variables. Mathematical expectation. Limit theorems for mathematical expectation. Variance and moments. Important inequalities in probability. Convergence of random variables. Independence of random variables. Laws of large numbers. Convergence of series of random variables. Characteristic functions. Inversion theorem. Weak convergence. Continuity theorem. Central limit theorems.</p>

1. COURSE DESCRIPTION

1.1. Course objectives

Number theory is a branch of mathematics which has always been considered as a motivation and foundation of all mathematics because of its simply formulated, but very difficult problems (some of which have been attempted to get solved for centuries). In solving these problems, the newest results in the fields of algebra, analysis and geometry are being applied. The main course objective is to get students familiar with the way of thinking and proving statements in the number theory, and especially with the algebraic and analytical methods in the number theory. For that purpose, it is necessary within the course to:

- analyse basic properties of integers: divisibility, prime numbers, prime factorization, Euclidean algorithm, congruencies
- describe the solutions of quadratic congruency by using the Legendre symbol and compare those congruencies by using the quadratic law of reciprocity
- analyse quadratic forms and display of integers by using quadratic forms, and specifically compare display of integers as sums of a fixed number of perfect squares
- define arithmetic functions and compare basic examples
- differentiate basic types of Diophantine equations and describe the methods of solving them
- define elliptic curves, analyse their properties and applications in the number theory
- apply the number theory in the public-key cryptography
- describe algebraic methods in the number theory and their application
- describe analytical methods in the number theory and their application

1.2. Course prerequisite

None.

1.3. Expected outcomes for the course

After completing this course, the students are expected to:

- analyse basic properties of integers and apply those properties to simple problems in the number theory related to divisibility and divisibility algorithms (A6, B7, D6, E6, F6)
- calculate using modular arithmetics, solve congruency equations and systems of congruencies (A6, B7, D6, E6, F6)
- apply and understand the quadratic law of reciprocity and formulas for calculating the Legendre symbol, to solve quadratic congruencies (A6, B7, D6, E6, F6)
- describe the display of integers by using quadratic forms in simple cases, compare and classify different quadratic forms (A6, B7, D6, E6, F6)
- show and analyse basic multiplicative functions and their properties, check and show connections between them (A6, B6, D6, E6, F6)
- define basic types of Diophantine equations and describe the methods of solving them (A6, B7, D6, E6, F6)
- define elliptic curves, analyse their basic properties and describe important open problems (A6, B6, D6, E6, F6)
- apply and understand the methods in the number theory in analysis of the public-key cryptosystem (A6, B7, D6, E6, F6)

- describe and analyse algebraic and analytical methods in the number theory and apply them to important problems in the number theory (A6, B6, D6, E6, F6)

1.4. Course content

Divisibility. Greatest common factor. Euclidean algorithm. Prime numbers. Congruencies. Euler theorem. Chinese remainder theorem. Primitive roots and indices. Quadratic remainders. Legendre symbol. Quadratic law of reciprocity. Divisibility properties of Fibonacci numbers. Quadratic forms. Reduction of binary quadratic forms. Distribution of prime numbers. Diophantine equations. Linear Diophantine equations. Pythagorean triples. Pell equation. Elliptic curves. Application of the number theory in the public-key cryptography.

1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies

In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.

General information		
Lecturer		
Course title	Introduction to Design Theory	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Compulsory	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	6
	Hours (L+E+S)	30 + 15 + 15

1. COURSE DESCRIPTION		
1.1. Course objectives		
<p>The main course objective is to get students acquainted with:</p> <ul style="list-style-type: none"> - the basic definitions, concepts, procedures and theorems of the design theory - the relation between different combinatorial structures, link designs with codes, graphs, differential sets, latin squares - basic applications of a combinatorial design in the coding theory, to threshold schemes, visual cryptography and group testing. 		
1.2. Course prerequisite		
None.		
1.3. Expected outcomes for the course		
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - define the basic concepts of the design theory, apply and understand some basic procedures in the design theory (A7, B7); - have knowledge of the basic theorems of the design theory and be able to prove them (B7, F4); - construct examples of block designs and related combinatorial structures (C7, D7, E5, F7, G7); - apply the design theory in the elementary problems of the coding theory, threshold schemes, visual cryptography and group testing (A7, B7, C7). 		
1.4. Course content		
<p>Basic definitions and properties of combinatorial designs; incidence matrices, isomorphisms and automorphisms, Fisher's inequality. Symmetric designs; differential sets, construction of differential sets, residual and derived designs, Hadamard matrices and designs, Bruck-Ryser-Chowla theorem. Resolvable designs; affine plane, projective plane, Bose's inequality, affine resolvable design. Steiner triple system; quasigroups, the Bose construction, the Skolem construction, cyclic Steiner triple systems. Orthogonal latin squares; mutually orthogonal latin squares, orthogonal arrays and transversal designs. Applications of combinatorial designs; codes, threshold scheme, visual cryptography, group testing.</p>		
1.5. Modes of instruction	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input checked="" type="checkbox"/> e-learning <input type="checkbox"/> field work <input type="checkbox"/> practice <input type="checkbox"/> practicum	<input checked="" type="checkbox"/> independent work <input checked="" type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input checked="" type="checkbox"/> project strategies <input checked="" type="checkbox"/> tutorials <input checked="" type="checkbox"/> other consultations <hr/>
1.6. Comments		

1.7. Student requirements

Students are required to attend classes and to do homework and project assignment. They are required to fulfill all obligations in accordance with the course curriculum.

1.8. Evaluation of assessment¹⁵

Class attendance & class participation	1.5	Seminar paper		Experiment	
Written exam		Oral exam	1.3	Essay	Research work
Project	1.5	Continuous assessment	1.7	Presentation	Practical work
Portfolio					

1.9. Assessment and evaluation of students' work during the semester and on the final exam

Students' work will be evaluated and assessed during the semester (e.g. preliminary exams, tests, seminars, online tests, homework etc.) and on the final exam.

Total number of points student can earn during the semester is 70, while on the final exam student can achieve 30 points.

The detailed elaboration of monitoring and evaluation of students' work will be described in the course curriculum.

1.10. Required literature (when proposing the program)

1. D.R. Stinson: Combinatorial Designs with Selected Applications, Lecture Notes (www.cacr.math.uwaterloo.ca/~dstinson/papers/designnotes.ps)
2. E.F. Assmus, J. D. Key: Designs and their Codes, Cambridge University Press, 1992.

1.11. Recommended literature (when proposing the program)

1. Anderson, I. Honkala: A Short Course in Combinatorial Designs, Internet Edition, 1997. (www.utu.fi/~honkala/designs.ps)

1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course

Title	Number of copies	Number of students
E.F. Assmus, J. D. Key: Designs and their Codes, Cambridge University Press, 1992.	2	15

1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies

In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.

¹⁵ **IMPORTANT:** Fill in the appropriate number of points for each of the chosen categories so that the sum of the allocated points corresponds to the course credit value. Add new categories, if necessary.

General information		
Lecturer		
Course title	Design and analysis of experiments	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Compulsory	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	6
	Hours (L+E+S)	30 + 15 + 15

1. COURSE DESCRIPTION

1.1. Course objectives

The main course objective is to get students familiar with the procedures for designing and analysing experiments and enable them to carry out these procedures in specific situations. For this purpose, it is necessary within the course to:

- describe basic principles and methods for designing experiments
- define and analyse some standard experimental designs
- describe and analyse a model for designs with one source of variation
- describe and analyse contrasts
- define and compare methods of multiple comparisons
- analyse methods for checking model assumptions
- analyse experiments with two or more crossed treatment factors
- define and analyse complete block designs
- update the knowledge about basic notions from design theory
- describe and analyse basic notions in statistical design theory

1.2. Course prerequisite

None.

1.3. Expected outcomes for the course

After completing this course, the students are expected to:

- describe and apply with understanding the basic principles and methods for designing and analysing experiments to particular examples in this field (A7, B7, E5, F5)
- analyse the model for designs with one source of variation (A7, B7, E4, F5)
- analyse and apply with understanding the methods of multiple comparisons (A7, B7, E4, F5)
- analyse models for two treatment factors (A7, B7, E4, F5)
- use the appropriate software package for solving problems in this field (A7, B7, E4, F5)
- analyse basic notions in statistical design theory (A7, B7, E4, F5)
- apply and use basic notions in statistical design theory to particular examples (A7, B7, E4, F5)
- mathematically prove validity of all procedures and formulas that are used within the course (A7, B7, E4, F5)

1.4. Course content

Basic principles and techniques for designing experiments. Planning experiments. Some standard experimental designs. Designs with one source of variation. Contrasts. Methods of multiple comparisons. Checking model assumptions. Experiments with two or more crossed treatment factors. Complete block designs. Statistical design theory.

1.5. General information		
Lecturer		
Course title	Introduction to databases	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Elective	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	5
	Hours (L+E+S)	30 + 30 + 0

1. COURSE DESCRIPTION		
1.1. Course objectives		
<ul style="list-style-type: none"> - Introduce students to basic concepts of database theory with emphasize on relational databases - Make students competent for independent work with relational databases (SQL) 		
1.2. Course prerequisite		
None.		
1.3. Expected outcomes for the course		
<p>After completing the course and meeting requirements in respect to course Introduction to Databases, students are expected to be capable of:</p> <ul style="list-style-type: none"> - Defining and updating relational database (SQL) - Conducting relational algebra operation in relational database model - Access database using various program tools 		
1.4. Course content		
<p>Introduction to databases. Database concepts. Relational data model. Relational algebra. Operations in relational model. Non-procedural languages for processing relational database – SQL. Integrity rules in relational data model. Concept of nul value and incomplete information. Elements of dependency theory. Normalization; Normal forms. Temporal databases. Introduction to object-relational database. Basic of physical organization, B-tree, R-trees.</p>		
1.5. Modes of instruction	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input type="checkbox"/> e-learning <input type="checkbox"/> field work <input type="checkbox"/> practice <input type="checkbox"/> practicum	<input checked="" type="checkbox"/> independent work <input type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input type="checkbox"/> tutorials <input checked="" type="checkbox"/> consultations <input type="checkbox"/> other
1.6. Comments	<p>During exercises, students are introduced to relational database - Oracle SQL. Students are prepared to independently produce an application along with drawing up and producing a relational database.</p>	
1.7. Student requirements		
<p>Students must satisfy the requirements for obtaining the signature (listed in the executive program) and to pass the final exam (written and oral).</p>		

<i>1.8. Evaluation of assessment¹⁷</i>						
Class attendance & class participation		1.75	Seminar paper		Experiment	
Written exam	0.5	Oral exam		0.5	Essay	
Project		Continuous assessment		1.25	Presentation	
Portfolio					Research work	
					Practical work	
					1	
<i>1.9. Assessment and evaluation of students' work during the semester and on the final exam</i>						
Students' work will be evaluated and assessed during the semester and in the final exam. Total number of points student can achieve during the semester is 70 (to assess the activities listed in the table), while in the final exam student can achieve 30 points.						
The detailed work out of monitoring and evaluation of students' work will appear in the executive program.						
<i>1.10. Required literature (when proposing the program)</i>						
1. R. Elmasri, S.B. Navathe: Fundamentals of Database Systems, Pearson - Addison Wesley, Boston, 2004.						
2. R. A. Mata-Toledo, P. K. Cushman: Fundamentals of Relational Databases, Schaums Outline Series, McGraw-Hill, 2000.						
<i>1.11. Recommended literature (when proposing the program)</i>						
1. S. Tkalac: Relacijski model podataka, DRIP, Zagreb, 1992.						
2. P. Atzeni, V. De Antonellis: Relational Database Theory; The Benjamin/Cummings Publ. Co., 1993.						
3. A.U. Tansel et.al.: Temporal Databases, The Benjamin/Cummings Publ. Co., 1993.						
<i>1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course</i>						
<i>Title</i>				<i>Number of copies</i>		<i>Number of students</i>
<i>1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies</i>						
In the last week of the semester students will evaluate the quality of the lectures. At the end of each semester (March 1 and September 30 of the current academic year) results of the exams will be analysed.						

¹⁷ **IMPORTANT:** Fill in the appropriate number of points for each of the chosen categories so that the sum of the allocated points corresponds to the course credit value. Add new categories, if necessary.

General information		
Lecturer		
Course title	Computer networks 1	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Elective	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	5
	Hours (L+E+S)	30 + 30 + 0

1. COURSE DESCRIPTION			
<i>1.1. Course objectives</i>			
<ul style="list-style-type: none"> - presenting to students the fundamental knowledge about the structure and architecture of computer networks and communication systems - teaching students to understand the basic principles of computer networks' implementation - training students for using Internet services 			
<i>1.2. Course prerequisite</i>			
None.			
<i>1.3. Expected outcomes for the course</i>			
<p>Upon completion of course, students will be able to do the following:</p> <ul style="list-style-type: none"> - describe and classify the structure and architecture of computer networks and communication systems - identify the basic principles of computer networks' implementation - develop skills for using basic network protocols and Internet services. 			
<i>1.4. Course content</i>			
<p>Organization of computer networks. OSI reference model. The physical layer: theoretical basis, transmission media. Implementation of the physical layer, cabling. The data link layer. Error detection and correction. Example data link protocols, HDLC, the data link layer in Internet. The medium access control sublayer (MAC), the channel allocation problem. IEEE 802 LAN standards. The network layer. Routing and congestion controls algorithms. Internetworking. The network layer in Internet. The transport layer services and elements of transport protocols. The transport layer in Internet. The application layer. Internet applications and their protocols: DNS, e-mail, World Wide Web. Data compression. Examples of computer networks. Network security.</p>			
<i>1.5. Modes of instruction</i>	<table border="0"> <tr> <td style="vertical-align: top;"> <input checked="" type="checkbox"/>lectures <input type="checkbox"/>seminars and workshops <input checked="" type="checkbox"/>exercises <input type="checkbox"/>e-learning <input type="checkbox"/>field work <input type="checkbox"/>practice <input type="checkbox"/>practicum </td> <td style="vertical-align: top;"> <input type="checkbox"/> independent work <input type="checkbox"/>multimedia and the internet <input type="checkbox"/> laboratory <input type="checkbox"/>tutorials <input checked="" type="checkbox"/>consultations <input type="checkbox"/>other </td> </tr> </table>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input type="checkbox"/> e-learning <input type="checkbox"/> field work <input type="checkbox"/> practice <input type="checkbox"/> practicum	<input type="checkbox"/> independent work <input type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input type="checkbox"/> tutorials <input checked="" type="checkbox"/> consultations <input type="checkbox"/> other

<i>1.6. Comments</i>	During exercises the students should acquire editing multimedia elements and development of simple multimedia forms by using appropriate software tools for producing images, sound, animation, and video.		
<i>1.7. Student requirements</i>			

Students should actively participate in all forms of works, perform practical exercises and produce seminar papers. They should pass the exam consisting of practical and oral part.

The practical part of the exam regards the exercises by using computer. This practical exam and seminar papers are the prerequisite for the oral part of the exam where the complete knowledge of the student is examined and evaluated.

1.8. Evaluation of assessment¹⁸

Class attendance & class participation		1	Seminar paper		Experiment	
Written exam	1	Oral exam	1	Essay	Research work	
Project		Continuous assessment	2	Presentation	Practical work	
Portfolio						

1.9. Assessment and evaluation of students' work during the semester and on the final exam

Students' work will be evaluated and assessed during the semester and in the final exam. Total number of points student can achieve during the semester is 70 (to assess the activities listed in the table), while in the final exam student can achieve 30 points.

The detailed work out of monitoring and evaluation of students' work will appear in the executive program.

1.10. Required literature (when proposing the program)

1. Radovan, M.: Računalne mreže, 2004. (digitalna skripta,)
2. Peterson, L. L., Davie, B. S.: Computer Networks: A System Approach, 3rd Edition

1.11. Recommended literature (when proposing the program)

1. Tanenbaum, A.S.: Computer Networks, 4th Edition. Prentice Hall, 2003.
2. Kurose, F. J., Ross, W. K.: Computer Networking: A Top-Down Approach Featuring the Internet, Pearson Addison Wesley, 2003.
3. Glass, K. M.: Beginning PHP, Apache, MySQL Web Development, Hungry Minds Inc, 2004.

1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course

Title	Number of copies	Number of students

1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies

In the last week of the semester students will evaluate the quality of the lectures. At the end of each semester (March 1 and September 30 of the current academic year) results of the exams will be analysed.

¹⁸ **IMPORTANT:** Fill in the appropriate number of points for each of the chosen categories so that the sum of the allocated points corresponds to the course credit value. Add new categories, if necessary.

General information		
Lecturer		
Course title	Introduction to combinatorial topology	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Elective	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	5
	Hours (L+E+S)	15 + 15 + 15

1. COURSE DESCRIPTION		
<i>1.1. Course objectives</i>		
<p>The main course objective is to get students acquainted with:</p> <ul style="list-style-type: none"> - elements of combinatorial topology and counting problems. - classification convex polytopes according to their „combinatorial properties”. 		
<i>1.2. Course prerequisite</i>		
None.		
<i>1.3. Expected outcomes for the course</i>		
<p>After completing the course, the students are expected to:</p> <ul style="list-style-type: none"> - define basic concepts of combinatorial topology of convex polytopes, apply and understand basic procedures for determining number of faces (A7, B7) - have knowledge of basic theorems in the field of combinatorial topology of convex polytopes and be able to prove them (B7, F4) - draw Schlegel diagrams for 3-polytopes (B5, C7, D7, F7) - independently or in groups examine a given problem (C7, E7, F7, G7) 		
<i>1.4. Course content</i>		
<p>Introduction, convex sets, partially ordered set, polytopes, simplexes, pyramids, bipyramids, Euler's theorem, Dehn-Sommerville equations. Number of faces of simplicial polytopes, lower bound conjecture, number of faces of cyclic polytopes, upper bound conjecture. Lower bound conjecture for simplicial spheres, abstract simplicial complexes, diagrams - Schlegel diagrams, h-vectors, upper bound conjecture for simplicial sphere.</p> <p>Some properties of h-vectors, McMullen's conditions, Cohen-Macaulay and Gorenstein complexes, monotonicity property of h-vectors.</p>

In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.

General information		
Lecturer		
Course title	Finite geometries	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Elective	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	6
	Hours (L+E+S)	30 + 0 + 15

1. COURSE DESCRIPTION		
<i>1.1. Course objectives</i>		
<p>The main course objective is to get students acquainted with the finite geometry theory. For this purpose it is necessary within the course to:</p> <ul style="list-style-type: none"> - define affine and projective spaces over finite fields, a finite projective and a finite affine geometry, analyse properties of the mentioned spaces (geometries), - analyse relationship between affine and projective spaces, - introduce the coordinatization of a projective space, - define and analyse a transformation of a projective space, especially dualities and polarities, - define a dual and a polar space and analyse their properties, - describe quadratics in projective spaces, - analyse properties of finite projective planes, - describe, analyse and differentiate Desargues and non-Desargues projective planes, - describe, analyse and differentiate polarities and quadratics in finite projective planes. 		
<i>1.2. Course prerequisite</i>		
None.		
<i>1.3. Expected outcomes for the course</i>		
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - define basic concepts of finite geometry theories, apply and understand basic procedures in problem solving (A7, B7, C5, D5, E5, F5, G5), - differentiate and analyse transformations of a projective space, apply and understand appropriate procedures in problem solving (A7, B7, C5, D5, E5, F5, G5), - analyse and differentiate various finite projective planes, apply and understand appropriate procedures in problem solving (A7, B7, C7, D7, E5, F7, G7), - analyse and differentiate polarities and quadratics in finite projective planes, apply and understand appropriate procedures in problem solving (A7, B7, C7, D7, E5, F7, G7) - mathematically prove validity of all procedures and formulas that are used within the course (B7, F4). 		
<i>1.4. Course content</i>		
<i>1.5. Modes of instruction</i>	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input checked="" type="checkbox"/> e-learning <input type="checkbox"/> field work	<input checked="" type="checkbox"/> independent work <input checked="" type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input checked="" type="checkbox"/> tutorials <input type="checkbox"/> other <hr/>

1.6. Comments						
1.7. Student requirements						
Students are required to attend classes and actively participate in them. They are required to achieve a certain number of points during the semester and to pass the final exam (details will be described in the course curriculum).						
1.8. Evaluation of assessment ²¹						
Class attendance & class participation		1.5	Seminar paper		1.5	Experiment
Written exam	0.5	Oral exam		1	Essay	
Project		Continuous assessment		1.5	Presentation	
Portfolio					Research work	
					Practical work	
1.9. Assessment and evaluation of students' work during the semester and on the final exam						
Students' work will be evaluated and assessed during the semester (e.g. preliminary exams, tests, seminars, online tests, homework etc.) and on the final exam.						
Total number of points student can earn during the semester is 70, while on the final exam student can achieve 30 points. The detailed elaboration of monitoring and evaluation of students' work will be described in the course curriculum.						
1.10. Required literature (when proposing the program)						
1. P. J. Cameron, Projective and Polar Spaces (available online: http://www.maths.qmul.ac.uk/~pjc/pps/)						
2. C. D. Godsil, Finite geometry (available online: http://quoll.uwaterloo.ca/mine/Notes/fgeom.pdf)						
1.11. Recommended literature (when proposing the program)						
1. H.S.M.Coxeter: Projektivna geometrija, Školska knjiga, Zagreb, 1982.						
2. V. Krčadinac, Unitali (available online: http://web.math.hr/~krcko/radovi/unitali10.pdf)						
3. D.Palman: Projektivna geometrija, Školska knjiga, Zagreb, 1984.						
1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course						
Title			Number of copies		Number of students	
Literature is available to students on-line (in the e-course).						
1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies						
In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.						

²¹ **IMPORTANT:** Fill in the appropriate number of points for each of the chosen categories so that the sum of the allocated points corresponds to the course credit value. Add new categories, if necessary.

General information		
Lecturer		
Course title	Seminar / M.Sc. thesis	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Compulsory	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	4
	Hours (L+E+S)	0 + 0 + 30

1. COURSE DESCRIPTION		
1.1. Course objectives		
<p>This seminar is the first step towards graduate thesis. The objective of the seminar is to enable students for:</p> <ul style="list-style-type: none"> - independent research and work with mathematical literature, - presentation of mathematical contents. 		
1.2. Course prerequisite		
None.		
1.3. Expected outcomes for the course		
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - present mathematical concepts using teaching aids and facilities (B7, C6, D6, E6, F6), - express correctly and fluently in speaking communication in the language of teaching and official language (D6), - use different communication types and forms (D5), - use relevant and recent professional literature independently and critically (B7, C6, D6, E6, F6). 		
1.4. Course content		
<p>All lecturers of the compulsory mathematics courses will participate in determining the content of this seminar by proposing the themes for the seminars (according to Regulations on graduate work and the final exam for the university graduate studies at the Department of mathematics, University of Rijeka). Each student will publicly present the theme and submit the work in the written form to the mentor. The work will present the basis for the graduate thesis which will be elaborated in conjunction with the mentor.</p>		
1.5. Modes of instruction	<input type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input checked="" type="checkbox"/> e-learning <input type="checkbox"/> field work	<input checked="" type="checkbox"/> independent work <input checked="" type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input checked="" type="checkbox"/> tutorials <input type="checkbox"/> other <hr/>
1.6. Comments		
1.7. Student requirements		
<p>Students are required to attend classes and actively participate in them. They are required to prepare and publicly present their seminar. Students are required to attend presentations of other students and actively participate in their analysis.</p>		

<i>1.8. Evaluation of assessment²²</i>						
Class attendance & class participation		1.5	Seminar paper	2.5	Experiment	
Written exam		Oral exam	Essay		Research work	
Project		Continuous assessment	Presentation		Practical work	
Portfolio						
<i>1.9. Assessment and evaluation of students' work during the semester and on the final exam</i>						
Students' work will be evaluated and assessed during the semester. Total number of points student can earn during the semester is 100. The detailed elaboration of monitoring and evaluation of students' work will be described in the course curriculum.						
<i>1.10. Required literature (when proposing the program)</i>						
Literature for each seminar will be proposed by the mentor - proponent of the topic.						
<i>1.11. Recommended literature (when proposing the program)</i>						
<i>1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course</i>						
Title		Number of copies		Number of students		
<i>1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies</i>						
In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.						

²² **IMPORTANT:** Fill in the appropriate number of points for each of the chosen categories so that the sum of the allocated points corresponds to the course credit value. Add new categories, if necessary.

Course title	Science popularization	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Elective	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	2
	Hours (L+E+S)	15 + 15 + 0

1. COURSE DESCRIPTION		
1.1. Course objectives		
<p>Science popularization is an integral part of teacher's and scientist's profession in any subject. The main course objective is to:</p> <ul style="list-style-type: none"> - develop the consciousness of the social context for the science and the need for its popularization, - train for active professional popularization, - develop the abilities for planning and conducting activities for popularization of science, scientific topics and scientific research results. 		
1.2. Course prerequisite		
None.		
1.3. Expected outcomes for the course		
<p>After completing the course, the students are expected to:</p> <ul style="list-style-type: none"> - describe and analyse the need and importance of the science popularization, - differentiate and analyse the channels for the science popularization, - describe types of popularization activities and their extent, scope, advantages and disadvantages, - describe the influence of public media on the promotion of scientific activities, - describe and analyse the interaction between social structures and the promotion of science (local community, educational system, the strategy of the University) - create a plan for the popularization contributions and activities, - implement the plan within the field work and within the Rijeka Science Festival. 		
1.4. Course content		
<p>Social context of science. Concept and short history of science popularization and communication and their role in knowledge based society. Channels for science popularization. Methods for direct science promotion (public lectures, presentations, workshops, science cafés, interactive exhibitions). Methods for promotion science in media (public relations, press announcements, articles, radio and TV, multimedia materials suitable for Internet publication). Specialty of popularization of natural sciences. Popularization of mathematics and physics. Social context of mathematics and physics. Popularization of mathematics and physics among kids. Popular literature. Mathematics in the everyday life. Margins of science. Unexplained phenomena.</p>

1. COURSE DESCRIPTION
<p><i>1.1. Course objectives</i></p> <p>The main course objective is to get students acquainted with practical and theoretical aspects of the methods for teaching mathematics in higher grades of elementary schools and in secondary schools. For this purpose it is necessary within the course to:</p> <ul style="list-style-type: none"> - introduce the national curriculum for mathematics in higher grades of elementary schools and in secondary schools, - prepare students for choosing the appropriate methods in the process of teaching mathematics, - acquaint students with the mathematical knowledge that is necessary for effective teaching of mathematics in higher grades of elementary schools and in secondary schools, - prepare students for organizing a math teaching class in higher grades of elementary schools and in secondary schools.
<p><i>1.2. Course prerequisite</i></p> <p>Mathematics education 1.</p>
<p><i>1.3. Expected outcomes for the course</i></p> <p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - analyse the mathematical curriculum in higher grades of elementary schools and in secondary schools (A6, B6, C5, D6, E5, F5), - differ and valorise different methods of teaching mathematics, especially methods according to the mathematical topics (A7, B6, C6, D6, E7, F7), - organize a mathematics teaching class in higher grades of elementary schools and in secondary schools in accordance with contemporary teaching methods and principles while using suitable teaching strategies (A7, B6, C6, D6, E7, F7), - plan and organize a mathematics teaching class in accordance with contemporary teaching methods and principles while using suitable teaching strategies, with the aim of developing mathematical processes and better understanding of mathematical concepts (A7, B6, C6, D6, E7, F7), - present mathematical content using the teaching aids and facilities (e.g. informational communicational technology) with the proper use of mathematical terminology and language (A6, B6, C6, D6, E7, F7), - independently create teaching materials in mathematics with or without using the advanced tools of ICT (A6, B6, C6, D6, E7, F7), - independently adjust current teaching materials in mathematics for becoming motivational for learning and suitable for accomplishing the planned learning outcomes (A6, B5, C5, D6, E5, F5), - use relevant and recent professional literature independently and critically (A6, B6, C6, D5, E7, F7), - cooperate with colleagues to acquire and develop professional competences, and use the feedback in the aim of improving the teaching process (A6, B6, C5, D6, E7, F7), - use the basic communication principles and techniques of effective professional communication, and express themselves accurately and fluently in spoken and written forms of communication in the language of teaching and in the official language (A6, B6, C6, D6, E6, F6).

1.4. Course content						
Methods of teaching mathematics (methods according to the source of knowledge and methods according to the mathematical topics). Empirical methods, induction, deduction, analysis and synthesis, generalization, abstraction, concretization, problem-solving methods (heuristics, solving problems), analogy and comparison, special mathematical cases. Methods for specific mathematical topics. In seminars, students will become familiar with the mathematical curriculum in the higher grades of elementary school and in secondary schools. Students will present selected topics in mathematics that are processed in higher grades of elementary school or in secondary schools.						
1.5. Modes of instruction		<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input type="checkbox"/> exercises <input checked="" type="checkbox"/> e-learning <input type="checkbox"/> field work		<input checked="" type="checkbox"/> independent work <input checked="" type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input type="checkbox"/> tutorials <input type="checkbox"/> other <hr/>		
1.6. Comments						
1.7. Student requirements						
Students are required to attend classes and actively participate in them. They are required to achieve a certain number of points during the semester and to pass the final exam (details will be described in the course curriculum).

Course title	Computer networks 2	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Elective	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	5
	Hours (L+E+S)	30 + 30 + 0

1. COURSE DESCRIPTION		
<i>1.1. Course objectives</i>		
<p>This course is a continuation of the course "Computer networks 1". The aims of the course are: (1) to present the methods of recording of the contents of various kinds, the methods of data compression and the transmission protocols; (2) to present the basic elements of the protection of secrecy and integrity of contents, and of the authenticity of communicators in computer networks; (3) to present the main network services of the application level. In the framework of the exercises, students have to learn to use the main network services and the language HTML.</p>		
<i>1.2. Course prerequisite</i>		
<p>In this course it is continued with the presentation of the basic knowledge of the computer networks and communication systems. The content of this course draws on those courses that deal with information systems, computer architecture and computer programming, and it directly extends the content of the course "Computer networks 1".</p>		
<i>1.3. Expected outcomes for the course</i>		
<p>Students are expected to acquire the basic knowledge about the methods of recording of the information contents of various kinds, about the methods of data compression and about the transmission protocols. They have to get familiar with the basic methods of the protection of secrecy and integrity of contents, and of the authenticity of communicators in computer networks, as well as with the network services of the application level, as specified in the "Course content" below. In the framework of the exercises, students have to learn to use the main network services and the language HTML.</p>		
<i>1.4. Course content</i>		
<p>Digital recording of the information contents: principles and methods. Basic formats and protocols: GIF, JPEG, MPEG, MP3. Compressing the digital records, with and without the loss of the information contents: principles and the ways of use. Compression and transmission: on-line transmission (video-conferencing). ITU-T network standards (H-series). Security and protection. Protecting the secrecy of contents, protecting the integrity of messages, establishing the identity of communicators: principles, protocols (algorithms) and methods of work. Protocols DES, RSA, MR5. Systems PEM, PGP, TLS. "Reliable third side"; firewall, proxy, filters. The application layer. The Internet applications (services) and their protocols. Domain name system (DNS), electronic mail system (SMTP), web page system (HTTP), multimedia and interactive applications (VIP, VIC). Controlling the functioning of a compound computer network. Administration and optimization; a system for managing of the functioning of computer network (SNMP).</p>		
<i>1.5. Modes of instruction</i>	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input type="checkbox"/> e-learning <input type="checkbox"/> field work <input type="checkbox"/> practice <input type="checkbox"/> practicum	<input checked="" type="checkbox"/> independent work <input type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input type="checkbox"/> tutorials <input checked="" type="checkbox"/> consultations <input type="checkbox"/> other <hr/>

1.6. Comments						
1.7. Student requirements						
Students should actively participate in all forms of works, perform practical exercises and produce seminar papers. They should pass the exam consisting of practical and oral part. The practical part of the exam regards the exercises by using computer. This practical exam and seminar papers are the prerequisite for the oral part of the exam where the complete knowledge of the student is examined and evaluated.						
1.8. Evaluation of assessment ²⁷						
Class attendance & class participation		1	Seminar paper		Experiment	
Written exam	1	Oral exam	1	Essay	Research work	
Project		Continuous assessment	2	Presentation	Practical work	
Portfolio						
1.9. Assessment and evaluation of students' work during the semester and on the final exam						
Students' work will be evaluated and assessed during the semester and in the final exam. Total number of points student can achieve during the semester is 70 (to assess the activities listed in the table), while in the final exam student can achieve 30 points. The detailed work out of monitoring and evaluation of students' work will appear in the executive program.						
1.10. Required literature (when proposing the program)						
<ol style="list-style-type: none"> 1. Radovan, M.: Računalne mreže, 2004. (digitalna skripta,) 2. Peterson, L. L., Davie, B. S.: Computer Networks: A System Approach, 3rd Edition, Morgan Kaufmann Publishers, 2003. 						
1.11. Recommended literature (when proposing the program)						
<ol style="list-style-type: none"> 1. Tanenbaum, A.S.: Computer Networks, 4th Edition. Prentice Hall, 2003. 2. Kurose, F. J., Ross, W. Course title	Statistical practicum	
Program	Graduate course in Discrete mathematics and its applications	
Course status	Elective	
Year	2	
Credit values and modes of instruction	ECTS credits / student workload	6
	Hours (L+E+S)	15 + 30 + 15

1. COURSE DESCRIPTION

1.1. Course objectives

The main course objective is to train students for application of numerical and statistical software packages in mathematical modeling. For that purpose, it is necessary within the course to:

- describe the simulation of outcomes of discrete and continuous random variables and vectors
- describe the selection of parametric model and execute the adaptation to data
- define the point and interval methods for parameter estimation
- describe the statistical hypothesis testing
- define the Kolmogorov - Smirnov test
- define the χ^2 -test
- describe the estimation of distribution and parameters of statistics by using Monte Carlo method
- describe methods of comparing two or more populations
- describe methods of testing hypotheses of independence and correlation tests on two-dimensional statistical features
- describe methods of estimation and model selection in regression analysis

1.2. Course prerequisite

None.

1.3. Expected outcomes for the course

After completing this course, the students are expected to:

- select and understand the parametric model and adapt to data (A7, B7, E4, F5)
- apply the Kolmogorov - Smirnov and χ^2 - test (A7, B7, E4, F5)
- estimate the distribution and parameters of statistics by using Monte Carlo method (A7, B7, E4, F5)
- apply the methods of comparing two or more populations (A7, B7, E4, F5)
- apply the methods of testing hypotheses of independence and correlation tests on the two-dimensional statistical characteristics (A7, B7, E4, F5)
- apply the methods of estimation and model selection in regression analysis (A7, B7, E4, F5)
- use numerical and statistical software packages in the mathematical modeling (A7, B7, E4, F5)
- mathematically prove validity of all procedures and formulas that are used within the course (A7, B7, E4, F5)

1.4. Course content

Simulation of outcomes of discrete and continuous random variables and vectors. Selection of parametric model and adaptation to data. Point and interval methods of parameter estimation. Statistical hypothesis testing. Kolmogorov - Smirnov test. χ^2 - test and the strength of a test. Estimation of distributions and parameters of statistics by using Monte Carlo method. Comparison of two populations. Comparison of several populations. Two-dimensional statistical features. Checking the hypothesis of independence. Tests of correlation. Evaluation and selection of models and tests on parameters in regression analysis.

None.		
<i>1.3. Expected outcomes for the course</i>		
<p>After completing this course, the students are expected to:</p> <ul style="list-style-type: none"> - analyse partial differential equations in the sense of their classifications (A7, B7, E4, F5) - differentiate boundary and initial conditions (A7, B7, E4, F5) - apply different theorems in analyzing elliptic, hiperbolic and parabolic equations (A7, B7, E4, F5) - solve Laplace equation, analyse Dirichle's and Neumann's problem and apply maximum principle (A7, B7, E4, F5) - apply Poisson's formula and Green's function (A7, B7, E4, F5) - solve the heat equation with different initial-boundary conditions (A7, B7, E4, F5) - solve the wave equation and analyse Cauchy's problem (A7, B7, E4, F5) - apply Fourier's method in solving partial differential equations (A7, B7, E4, F5) - mathematically prove validity of all procedures and formulas that are used within the course (A7, B7, E4, F5) 		
<i>1.4. Course content</i>		
<p>Classification of second order equations. Elliptic, hiperbolic and parabolic equations. Examples. Laplace equation. Dirichle's and Neumann's problem. Green's representation. Green's function. Poisson's formula. Principle of maximum. Potentials. Wave equation. Cauchy's problem. D'Alambert's formula. Initial-boundary problem. Fourier's method. Equation of heat conducting. Principle of maximum. Cauchy's problem. Poisson's formula. Initial-boundary problem. Fourier's method.</p>		
<i>1.5. Modes of instruction</i>	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input checked="" type="checkbox"/> e-learning <input type="checkbox"/> field work <input type="checkbox"/> practice <input type="checkbox"/> practicum	<input checked="" type="checkbox"/> independent work <input type="checkbox"/> multimedia and the internet <input type="checkbox"/> laboratory <input checked="" type="checkbox"/> tutorials <input checked="" type="checkbox"/> consultations <input type="checkbox"/> other

1.6. Comments							
1.7. Student requirements							
Students are required to attend classes and actively participate in them. They are required to achieve a certain number of points during the semester and to pass the final exam (details will be described in the course curriculum).							
1.8. Evaluation of assessment ³³							
Class attendance & class participation			1.4	Seminar paper		Experiment	
Written exam	2.4	Oral exam	1.6	Essay		Research work	
Project		Continuous assessment	0.6	Presentation		Practical work	
Portfolio							
1.9. Assessment and evaluation of students' work during the semester and on the final exam							
Students' work will be evaluated and assessed during the semester (e.g. preliminary exams, tests, seminars, online tests, homework etc.) and on the final exam. Total number of points student can earn during the semester is 70, while on the final exam student can achieve 30 points. The detailed elaboration of monitoring and evaluation of students' work will be described in the course curriculum.							
1.10. Required literature (when proposing the program)							
<ol style="list-style-type: none"> 1. D.Gilber, S.Trudinger: <i>Eliptic partial differential equations of second order</i>, Springer, 1977. 2. L. C. Evans: <i>Partial Differential Equations</i>, American Mathematical Society, 2002. 3. H. Levine: <i>Partial Differential Equations</i>, American Mathematical Society, 1997. 							
1.11. Recommended literature (when proposing the program)							
<ol style="list-style-type: none"> 1. I. Aganović, K. Veselić: <i>Linearne diferencijalne jednačbe</i>, Element, Zagreb, 1997. 							
1.12. Number of copies of required literature in relation to the number of students currently attending classes of the course							
<i>Title</i>					<i>Number of copies</i>		<i>Number of students</i>
1.13. Quality assurance which ensure acquisition of knowledge, skills and competencies							
In the last week of this course, the students will evaluate the quality of the lectures. Additionally, the analysis of the exam results will be conducted.							

³³ **IMPORTANT:** Fill in the appropriate number of points for each of the chosen categories so that the sum of the allocated points corresponds to the course credit value. Add new categories, if necessary.
