The Opial inequality proved in 1960. and its various generalizations, extensions and discretizations play an important role in establishing the existence and uniqueness of initial and boundary value problems for ordinary and partial differential equations as well as difference equations.

In this work some new Opial type inequalities with the higher order derivatives are proved. These results generalize previous known results.

MSC2010: 26D10.

Keywords: Opial type inequalities, absolutely continuous function, Beta function.
